

Applications

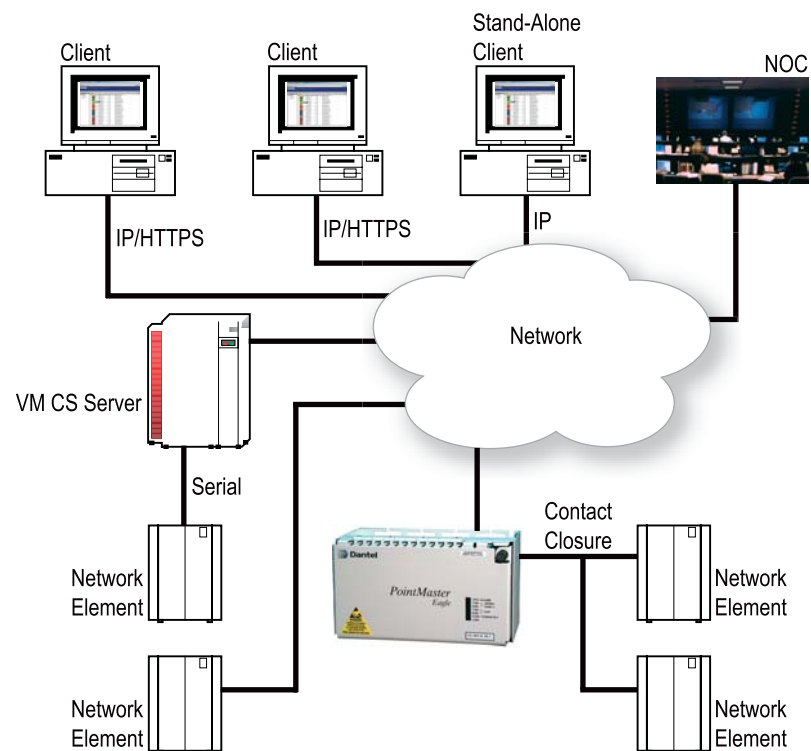

VisionMaster

Key Features

- Compatible with Windows NT, 2000, 2003, and XP
- TL-1, version 3 and 5, inbound and outbound
- SNMP, version 1 and 2c, inbound
- DCPF and ASCII inbound
- Operates standalone or reports to the NOC
- 216 sessions total, IP protocols SNMP, TL1, DCPF and ASCII
- History Log file for all activity
- WebBrowser option
- Local visual and audible annunciation
- Local .wav file annunciation
- Ping Network Element monitoring
- Mask/Hide alarms
- TACACS+ security
- Import/export and upload/download common device database files
- E-Mail notification
- Paging notification, alpha/numeric
- Remote editing of all databases
- Auto-run, load last database, begin polling
- Sort by point number, description, COS, connection and priority
- Alarms filtered by priority
- Date/time stamping
- Communication failure notification
- On-line help
- Multiple serial polling ports
- Supports legacy Dantel devices

VisionMaster CS

VM CS Feature Additions

- Windows Web-Server Security (IIS) Client-Server architecture
- 500+ sessions total, IP protocols TL1 and DCPF
- Partitioned views for Area Of Responsibility
- TL1, version 3 and 5, outbound
- DCPF, inbound

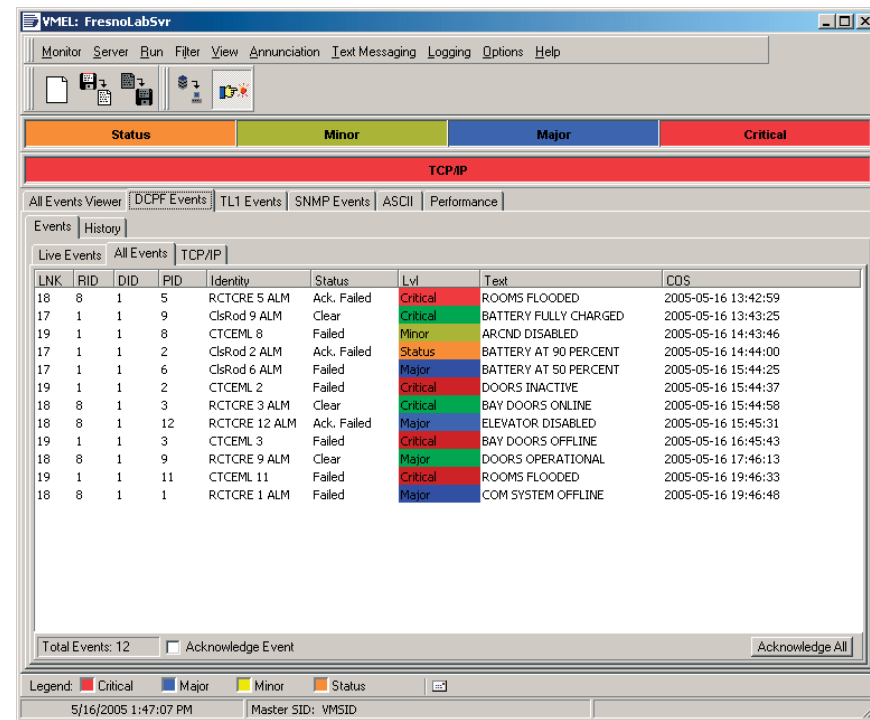

VisionMaster..

the leading solution for local and enterprise alarm monitoring.

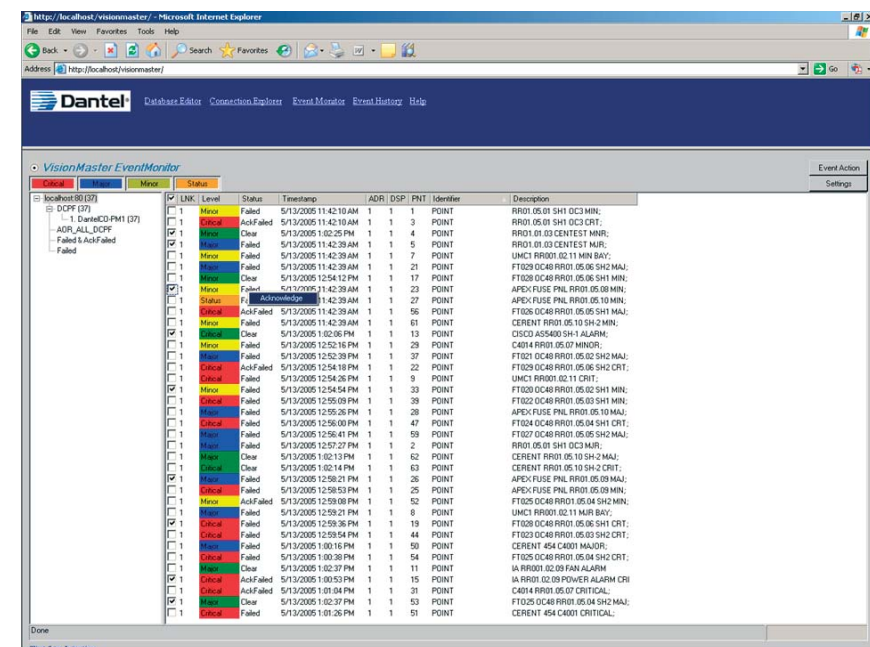

Another Quality Product From The Industry Leader

At Dantel, it is our business goal to design and deliver defect-free products on time, that meet our customer's requirements. Our company has been certified to ISO9001 since 1995, and as of November 2003, we have been certified to ISO9001:2000. In addition, Dantel has received recognition and awards from various telecommunication companies for our supplier quality programs. We are committed to delivering high quality products on time, meeting or exceeding customer requirements, designing highly reliable products, and certifying new products for NEBS/UL and other applicable industry safety standards.

Networks are evolving. Management is essential.

VisionMaster

VisionMaster CS

Manage your network with the VisionMaster software suite.

VisionMaster: Intelligent event viewing and notification of critical network-affecting events.

VisionMaster

Dantel's VisionMaster is the smart solution for local network monitoring of service-affecting events. VisionMaster is easy to use and quite intuitive. Multiple communication protocols make it simple for you to decide how you will communicate with your equipment and view events in your network.

Dantel's VisionMaster event view can be customized to suit your various needs. You can configure the applications event view for optimum visual and audio response. Visionmaster provides a filtering system that allows you to display events according to different levels, status, colors and alarm sounds. It also provides a mechanism that sends pages or emails when an event occurs, giving you the power to respond immediately to network-threatening events.

Dantel's VisionMaster provides the ability to store event data as it occurs, in a history archive. Logged events can then be imported into any Windows database application, for seamless storage, sorting and viewing. Additionally, with VisionMaster, all of your Dantel monitoring devices can be monitored and managed, with a database application that makes complex tasks simple.

VisionMaster. The local alarm monitoring solution.

VisionMaster CS

Dantel's VisionMaster Client-Server is the ideal solution for remote monitoring of enterprise networks. It is built on state-of-the-art Microsoft technology, delivering a robust and efficient computing platform.

The baseline architecture for VisionMaster CS consists of a Microsoft IIS server, with the clients either on the same server or connected to the server through a network. The client receives alarms from any device that it is monitoring in real time, allowing you to monitor your network no matter where you are.

The VisionMaster CS browser-based and smart client applications provide you with a secured-socket layer, SSL-certified connection to the server. Secure-socket delivers a secure connection, insuring the integrity of your data. Multiple user security levels allow for a variety of tasks, from viewing connections to configuring the CS server. For added security, all log in and log out information is stored and viewable in the history log.

Rich event views can be created for users quickly and easily, based on protocol, connection and alarm point. Additionally, alarm data can be grouped into virtual areas of responsibility, providing greater granularity for viewing. You will be able to view just the set of data you are interested in.

VisionMaster CS supports audio and visual annunciation, and it will run custom audio files for different levels of alarms. You can save this or any other data anywhere on your server, local PC, or at any other network location. Additionally, the VisionMaster CS History Log stores event data, providing you with a view of past alarms.

VisionMaster CS. The local and remote alarm monitoring solution.

VisionMaster and VisionMaster CS. Eyes and ears for every site.
